

Maryam Jafartabar

Junior Front-End Developer

+98 939 949 7460 | Mazandaran, Iran | GitHub: github.com/maryam138317 | Portfolio: portfolioo-orcin-nine.vercel.app

SUMMARY

Junior Frontend Developer focused on React and Next.js, with a strong interest in web development and a habit of continuously learning and solving software problems. Experienced in building projects with modern frontend technologies. My background in software engineering, gained through a hands-on internship, sharpened my ability to analyze requirements and translate them into clear technical specifications — a foundation that now shapes how I approach UI architecture, component design, and building interfaces that truly match user and product needs.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS

UI & Styling: Tailwind CSS, Framer Motion, Material UI, Shadcn UI, Responsive Design

State Management & Data: React Query, Redux Toolkit, Zustand, React Hook Form, Yup

Localization: i18n

Tools & Workflow: Git, GitHub, Vercel

Other: Python

WORK EXPERIENCE

Software Engineering Intern · 6 months

NegarKhodro

- Contributed to the software development lifecycle through requirements analysis, documentation, and design activities.
- Prepared and maintained software engineering documents including PRD, WBS, and FAB, adapting them to changes in product requirements.
- Analyzed business processes and system requirements, translating them into UML diagrams.
- Worked on data modeling and ERD as part of the system design process.
- Gained practical experience with requirements changes, documentation updates, and the iterative nature of software development.

PROJECTS

Financial Dashboard [Demo](#) [GitHub](#)

Next.js · Zustand · Shadcn UI

A full-featured, responsive dashboard for managing transactions, with charts to visualize spending and saving. Includes goal-based saving so users can set aside money toward future purchases.

Dish Directory [Demo](#) [GitHub](#)

React · DummyJSON · Local Storage

A website for browsing meals and recipes, using mock data from DummyJSON and local storage to persist state for logged-in users.

Task Manager [GitHub](#)

Next.js · better-sqlite3

A full-stack daily planning app built with Next.js, using better-sqlite3 as the database engine to help users manage their daily plans. (No live demo — the app relies on a local tasks.db file, which isn't compatible with static deployment.)

Online Shop [Demo](#) [GitHub](#)

Redux Toolkit · React Query

A simple e-commerce app built to practice state management, using Redux for client state and React Query for server state.

EDUCATION

Bachelor's Degree in Computer Science

University of Mazandaran, Babolsar

LANGUAGES

English: Intermediate | Persian: Native
